Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis,

This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's diseases).

                                                                                                                                                                                                                                                                                                                                                                          В
                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is described as a derivative of the human CC bcl-w gene (see AAXX5132) and encodes Bcl-w protein (see AAY05532), a CC pro-survival member of the Bcl-2 family which is widely expressed CC and which is essential for spermatogenesis. The invention relates CC identification of molecules and genetic sequences useful for the CC inducing or reducing fertility of male animals. Methods are CC provided for the treatment of infertility, or for reducing CC provided for the treatment of infertility, or for reducing CC entility, by modulating spermatogenesis. An animal model carries CC a mutation is at least one allele of the human or murine bcl-w gene CC or in a gene associated with bcl-w. Such animals have disorganised CC seminferous tubules and are substantially infertile, but possess no CC They can be used to screen for therapeutic molecules including GC genetic sequences capable of inducing, enhancing or otherwise CC infertility spermatogenesis in animals, or which can induce
                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  맑
               The present sequence is the human bcl-w gene encoding Bcl-w protein (see AAV05530), a pro-survival member of the Bcl-2 family which is converted to the Bcl-2 family which is converted to the provided for spermatogenesis. The invention relates generally to a method of treatment and to an invention relates generally to a method of treatment and to an invention suseful for inducing or reducing fertility of male sequences useful for inducing or reducing fertility of male contains. Methods are provided for the treatment of infertility, or contained and fertility, by modulating spermatogenesis. An animal condel carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animals have disorganised seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for the intertile of

The bcl-2 family have both apoptosic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct expression in vivo. Also, antisense constructs can be used in disorders

CC specification also describes rat bel-y protein (Rbcl-y) and the bel-y and the programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y compositions may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be compositions as the cell death inhibitors, they may be composited in the cell death pathway. If they act as cell death inhibitors, they may be composited in the cell sease, neural and muscular degenerative diseases composited the cell muscular degenerative diseases composited the cell death, aging, spinal cord injuries and amyotrophic lateral corditions where cells under go premature cell death as a consult of triggers which may or may not be apparent. They may also be composited period. In contrast, if they act as cell death stimulators, composited cell life span such as cancer (especially kaposi's sarcoma and composited cell life span such as cancer (especially kaposi's sarcoma and conditions cell death in, and hence control, parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The mammalian bcl-y genes encode a protein that is a member of the bcl-2 family, components in the cell death pathway. The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity category. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 2; Column 13/14; 27pp; English.

The present sequence encodes rat bcl-y protein (Rbcl-y). The C specification also describes human bcl-y protein (Hbcl-y). Rbcl-y and C Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC the cell death pathway. If they act as cell death inhibitors, they may be CC used in therapies to treat subjects suffering from: strokes, head trauma, CC (especially multiple sclerosis), myocardial infarction, vitally induced CC (especially multiple sclerosis), myocardial infarction, vitally induced CC cell death, aging, spinal cord injuries and amyotrophic lateral CC used in this way to develop cell lines which remain viable in culture for CC used in this way to develop cell lines which remain viable in culture for CC an extended period. In contrast, if they act as cell death stimulators, CC prolonged cell life span such as cancer (especially kaposi's sarcoma and CC lung cancer) and auto/hyperimmune diseases. They may also be used to xxx

The present sequence is the mouse bcl-w gene encoding Bcl-w protein (see AAY()5531), a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or

for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or model carries as mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animal murine bcl-w gene or in a gene associated with bcl-w. Such animally have disorganised seminferous tubules and are substantially have disorganised seminferous tubules and are substantially have disorganised seminferous tubules and are substantially by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          27-MAR-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    family. This gene promotes cell survival, so its modulation is useful in family. This gene promotes cell survival, so its modulation is useful in stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, stroke, Alzheimer's disease, myocardial infarct, infection or in cell hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell transplants. Up-regulation of the gene can also be used to modify cell transplants of invivo, e.g. to develop new lines, to facilitate lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w during genetic modification. It can be used to produce recombinant Bcl-w during denetic modification. It can be used to produce recombinant Bcl-w during denetic modification, antibody production or screening of potential modification.

                fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bol'w gene seminferous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including facilitating spermatogenesis in animals, or which can induce include the seminatogenesis in animals, or which can induce

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qγ
                                                                                                                        The present sequence is described as a derivative of the mouse bcl-w gene (see AAX25133) and encodes Bcl-w protein (see AAY05533), and which is essential for spermatogenesis. The invention relates identification of molecules and general and to an animal model for the inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mattain in the inventor of the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mattain is a first provided for the treatment of infertility.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents. The products can also be used for detection and diagnosis.

19-JAN-1999

conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for described uses).

Sequence 1864 BP; 494 A; 403 C; 506 G; 455 T; 6 other;

```
This sequence represents a nucleic acid molecule designated Gene 120 ATCC 209048) which encodes a secreted human protein. The gene can be immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability of the superior only acid sequences: AAV5951-yamino acid sequences: AAV7951-yamino acid sequences: AA
conditions e.g. by protein or gene therapy. Also, pathological

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular diseases such as retinopathy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DЪ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ρ
                                                                agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                 derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           03-AUG-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animals have disorganised seminferrous tubules and are substantially infertile, but possess no other major abnormalities as determined by histological examination. They can be used to screen for therapeutic molecules including genetic sequences capable of inducing, enhancing or otherwise facilitating spermatogenesis in animals, or which can induce infertility.

This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's disease, myocardial infarct, muscular degeneration, hypoxia, ischaemia, human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured in vivo, e.g. to develop new lines, to facilitate isolation of hybridomas and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid encoding apoptosis related gene bcl-w - used to induce or inhibit cell survival, e.g. for treatment of cancer and

bcl-w gene (see AAX2513), and encodes Bcl-w protein (see AAY2513), pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for identification or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries fertility, by modulating spermatogenesis.
                                                                                                                                                                                                                                                                                                                                        16-SEP-1998;

The bcl-2 family have both apoptotic activity and the apoptosis blocking activity. bcl-y falls in the apoptosis activity cattegory. The recombinant protein may be used to prevent uncontrolled cell growth, either by its direct administration to recombinant genetic constructs to increase its expression in vivo. Also, antisense constructs can be used in disorders where prevention of cell death is desired.

The present sequence encodes rat bcl-y protein (Rbcl-y). The CC specification also describes human bcl-y protein (Hbcl-y). Rbcl-y and CC Hbcl-y are homologues of the bcl-2 protein thought to be involved in CC programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC the cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y CC the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: strokes, head trauma, CC (especially multiple sclerosis), myocardial infarction, vitally induced CC (especially my may also be cell death, aging, spinal cord injuries and amyotrophic lateral CC (especially my to develop cell lines which remain viable in culture for CC (especially my to develop cell lines which remain viable in culture for CC (especially may be used to treat conditions associated with CC (especially and bbcl-y may be used to treat conditions associated with concerning and auto/hyperimmune diseases. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              animal model for the identification of molecules and genetic animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male sequences useful for inducing or reducing fertility, or animals. Methods are provided for the treatment of infertility, or animals. Methods are provided for reducing fertility, by modulating spermatogenesis. An animal for reducing fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or model carries a mutation is at least one allele of the human or murine bcl-w gene or in a gene associated with bcl-w. Such animal murine bcl-w gene or in a gene associated with bcl-w. Such animal have disorganised seminferous tubules and are substantially have disorganised semination. They can be used to screen for by histological examination. They can be used to screen for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the human bcl-w gene encoding Bcl-w protein (see AAY05530), a pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               An animal model exhibiting reduced levels of a Bcl-w protein and/or

                                                                                                                                                                                                                                                                                                This sequence encodes a novel human gene, bcl-w, from the bcl-2 gene family, extracted from an adult brain library. This gene promotes cell survival, so its modulation is useful in treatment of cancer or auto-immune diseases, degenerative diseases (e.g. stroke, Alzheimer's human immunodeficiency virus infection or in cell transplants. Up-regulation of the gene can also be used to modify cell lines cultured and to increase survival of primary explants during genetic modification. It can be used to produce recombinant Bcl-w for therapy, diagnosis, antibody production or screening of potential modulators.

         The present sequence is described as a derivative of the human bcl-w gene (see AAX25132) and encodes Bcl-w protein (see AAY05532), pro-survival member of the Bcl-2 family which is widely expressed and which is essential for spermatogenesis. The invention relates generally to a method of treatment and to an animal model for the identification of molecules and genetic sequences useful for inducing or reducing fertility of male animals. Methods are provided for the treatment of infertility, or for reducing fertility, by modulating spermatogenesis. An animal model carries
fertility, by modulating spermatogenesis. An animal model carries a mutation is at least one allele of the human or murine bcl-w gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      οy
                       Alzheimer's Disease, neural and muscular degenerative diseases (especially multiple sclerosis), myocardial infarction, vitally induced sclerosis conditions where cells under go premature cell death as a result of triggers which may or may not be apparent. They may also be an extended period. In contrast, if they act as cell death is timulators, prolonged cell life span such as concer (especially kaposi's sarcoma and lung cancer) and auto/hyperimmune diseases. They may also be used to
                                                                                                                                                                                                           The present sequence encodes human bcl-y protein (Hbcl-y). The specification also describes rat bcl-y protein (Rbcl-y). Rbcl-y and Hbcl-y are homologues of the bcl-2 protein thought to be involved in programmed cell death (apoptosis and necrosis). Rbcl-y and Hbcl-y proteins may be used to treat conditions associated with a disruption of the cell death pathway. If they act as cell death inhibitors, they may be used in therapies to treat subjects suffering from: Strokes, head trauma, also homological proteins and proteins are traumants.
                   lung cancer) and auto/hyperimmune diseases. They measure cell death in, and hence control, parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  23-FEB-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-JAN-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotides and encoded polypeptides - used to develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, allergies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the nucleotide sequence of the cDNA clone Bcl-like (HAICH29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polypeptides. They can be used for e.g. treating chronic inflammatory diseases, immunological disorders, autoimmune diseases, inflammatory diseases, various allergies, and as anti-infectious agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 2; Fig 12A-12D; 120pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 or tumours

Carter KC, Duan R, Ebner R, Eher CL, Florence KA, Greene JM, Y, Moore PA, Ni J, Olsen HS, DR, Young PE, Yu GL, Zeng Z; Greene JM, Rosen CA; Endress GA;

New isolated human genes and the secreted polypeptide(s) they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders

Claim 1; Page 353-354; 721pp; English.

ATCC 209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological sequence represents a nucleic acid molecule designated Gene 120 the human cDNA clone HGBGZ64 (deposited as clone ATCC 97902 and 209048) which encodes a secreted human protein. The gene can be of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in the conditions of the polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 251 caggictocgaigaactttticaagggggccccaactggggccgccitgiagccitcttt

The invention relates to a spatially-addressable set of single exon CC nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting CC the probes with a collection of detectably labelled nucleic acids CC derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for CC verifying the expression of regions of genomic DNA predicted to CC determining predisposition and/or prognosing breast disease. Gene CC expression analysis is useful for assessing the toxicity of chemical CC diversity of probes for measuring gene expression, with far less bias CC rapid production of functional information from genomic sequence. The cC resent sequence is a single exon nucleic acid probe of the invention.
